MICRO TOPPING

Seamless Surface

Microtopping is perfect for anyone who is looking for a unique and elegant finish, a continuous and extremely solid surface that can give any space depth, light and harmony, all at the same time.

New design criteria has seen concrete become increasingly in demand by architects and designers to create spaces with contemporary aesthetics. Micro topping is an innovative solution that combines the aesthetic qualities of concrete with the modern requirements of a smart and green space.

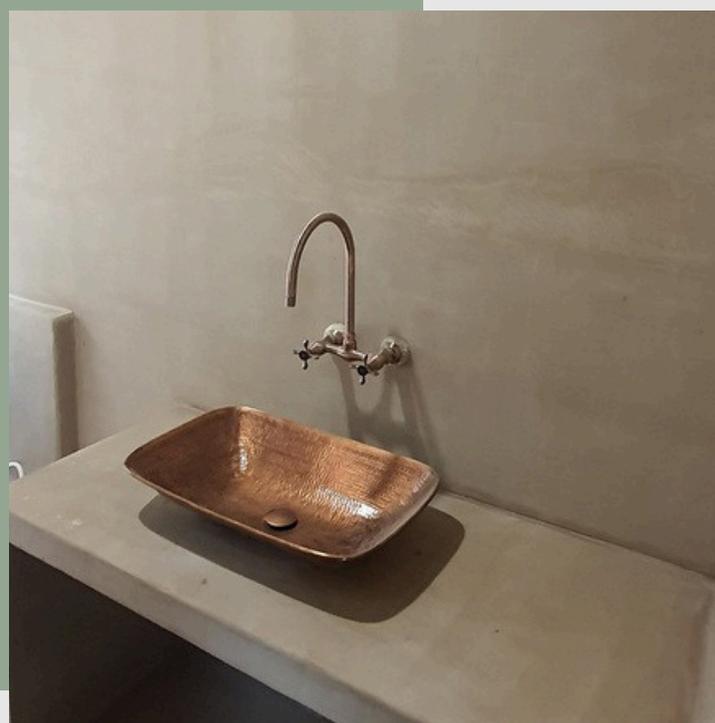

Modern Design

Microtopping can lend character to modern, minimalist spaces, or bring discreet sophistication with classic, rustic or antique finishes to existing property. It can be personalised to suit any style by choosing the preferred colour scheme and adding shiny, cloudy or variegated.

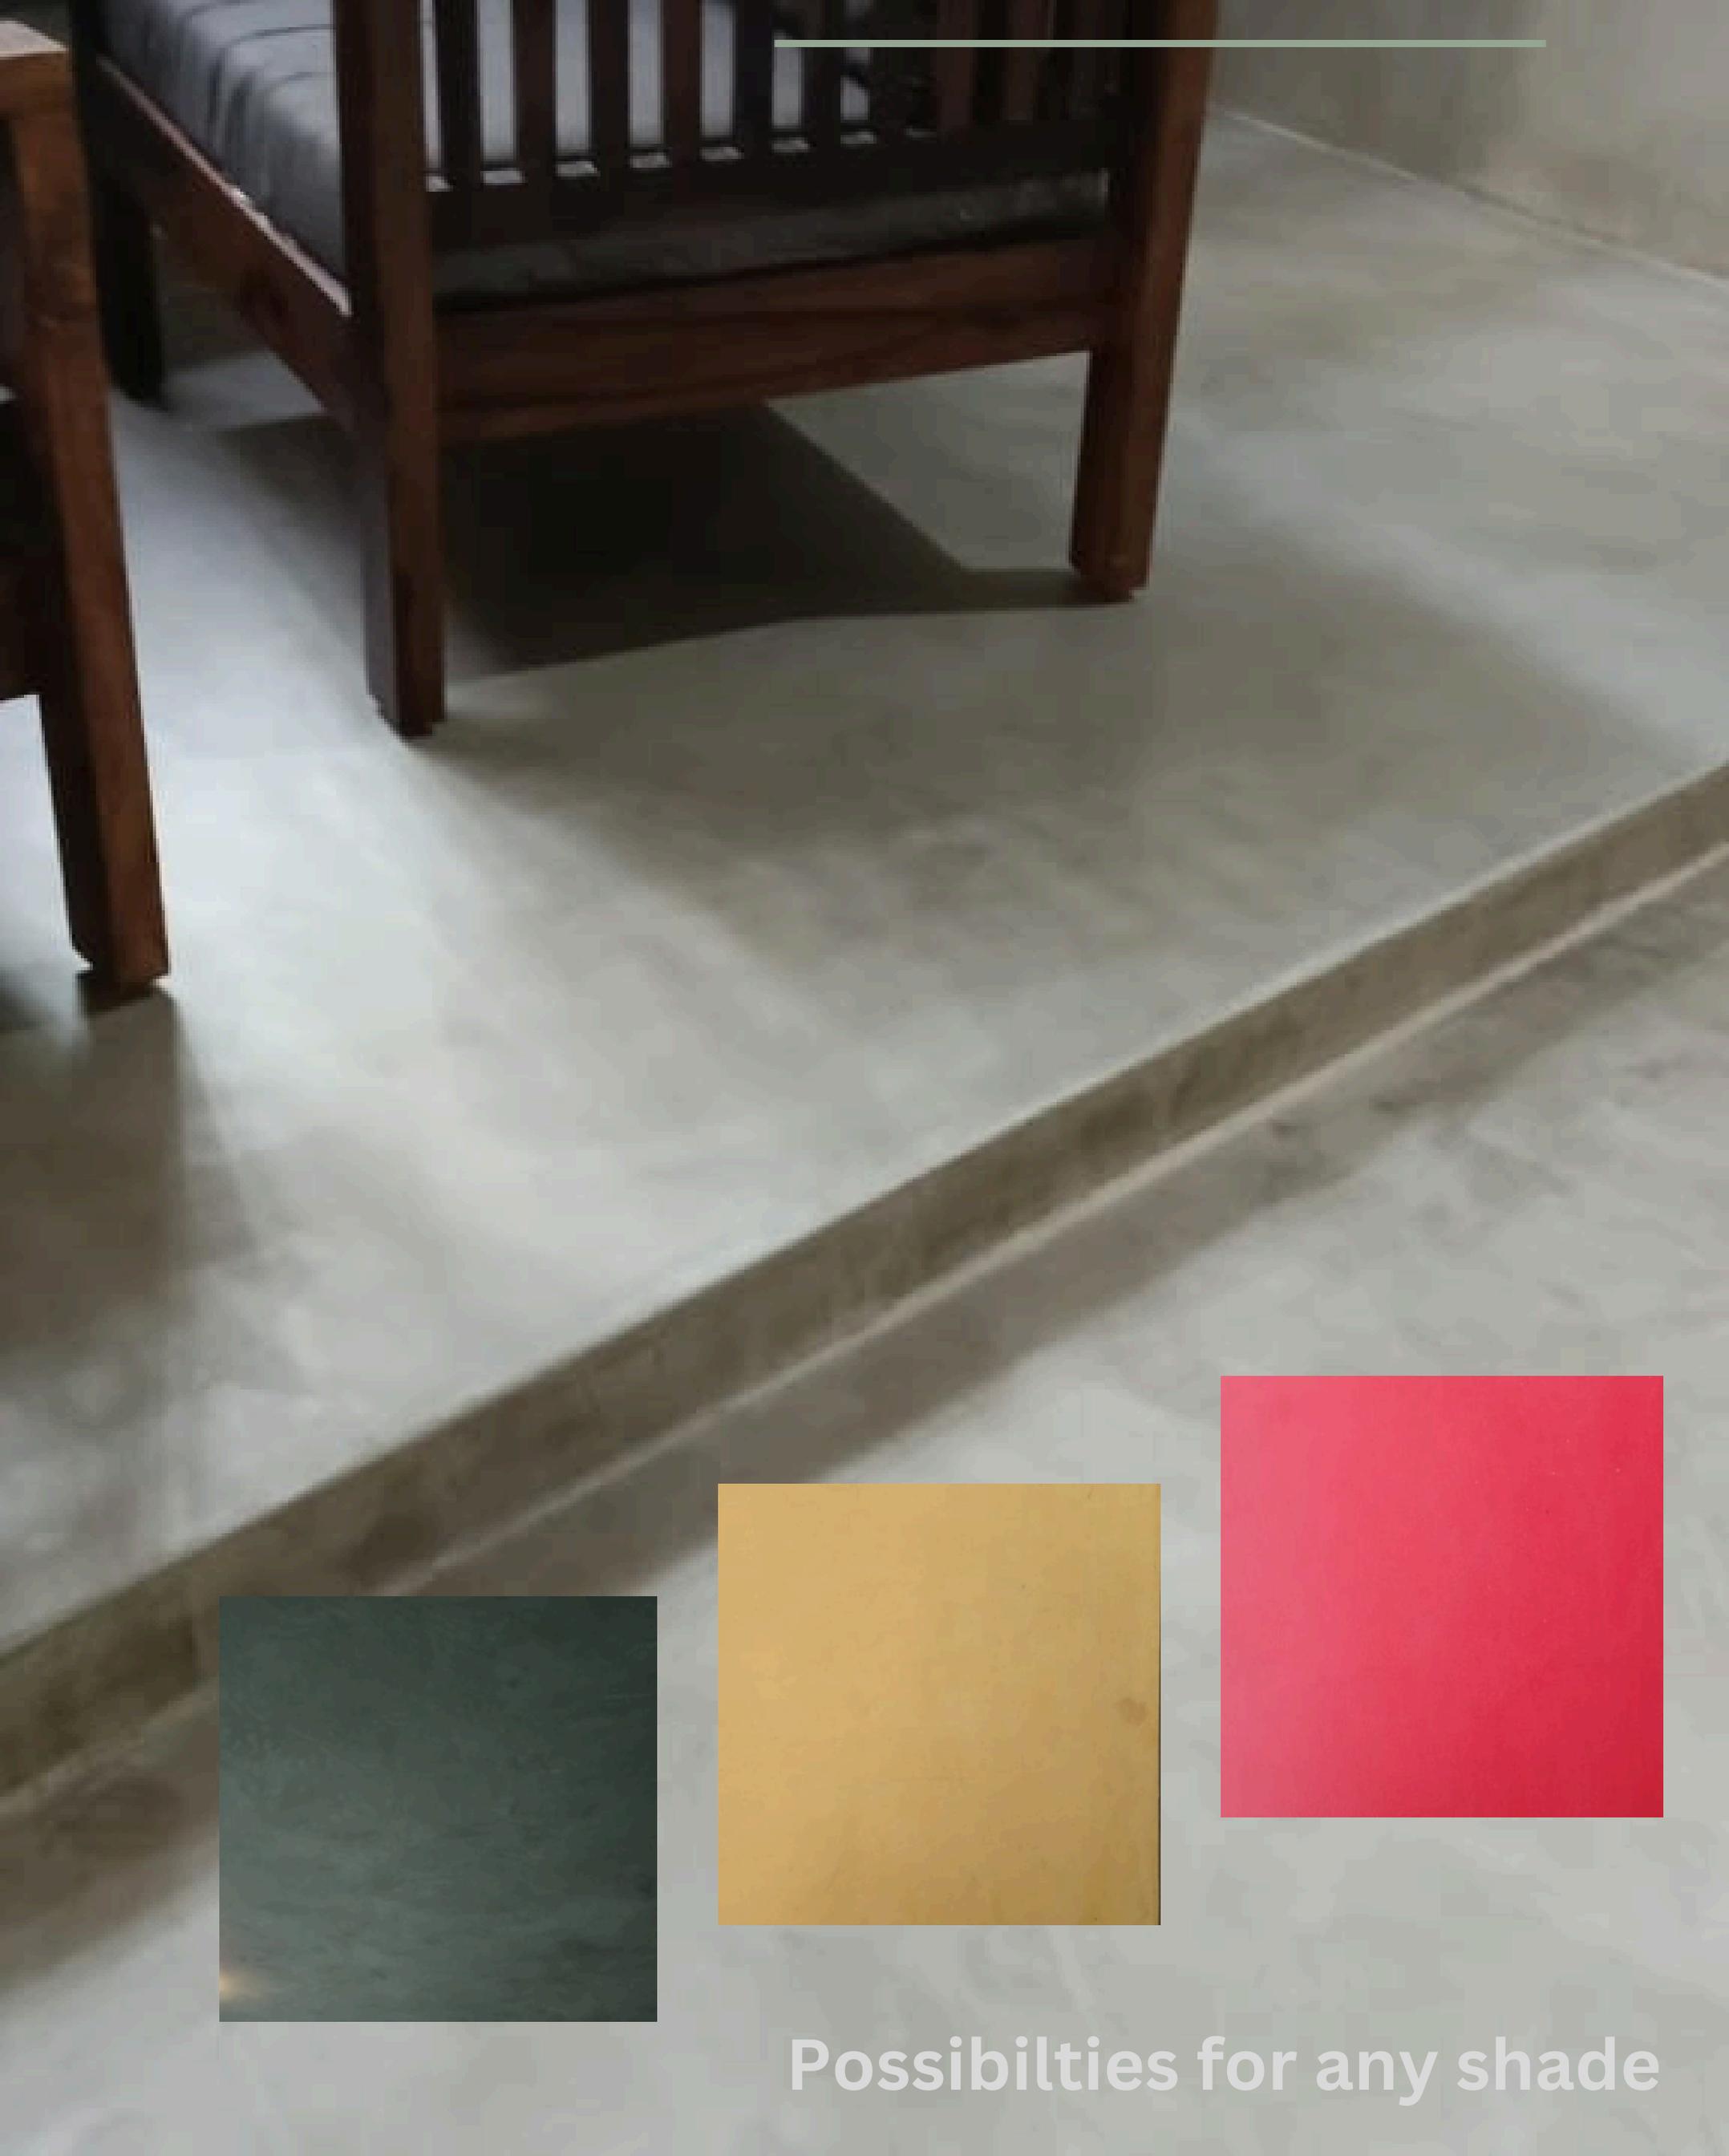

The feature that best distinguishes Microtopping is its ability to create continuous, seamless surfaces for linear and enveloping environments. Another of its many advantages is the possibility of applying it without limit or joints, inside or outside, on floors or walls.

It can be used either indoors or outdoors and in addition to its many flooring uses, is equally perfect for coating vertical surfaces, such as plasterboard or masonry walls on stairs, in bathrooms or showers.

Possibilities for any shade

Microtopping is very versatile: its aesthetic qualities and ease of application make it suitable for houses, shops, showrooms, restaurants, hotels, Offices and Farm House.

Whether you are a designer or an architect, Microtopping gives free reign to your creativity.
